

Master G

11A1

Highly concentrated combination detergent

Description

Clax Master G is a mainwash detergent, based on a mixture of alkalis and water hardness binders, for use in medium to hard water (125 - 250 ppm). Clax Master G is designed for use in commercial laundries

Key properties

Clax Master G is a powerful mainwash detergent, which is based on a balanced blend of alkali, water hardness sequestering agent and anti-greying agents. The excellent building system ensures low water hardness ion concentration and consequently prevents precipitation of detergent components. In this way this building system also functions as anti-greying agent by preventing formation and deposition of water hardness salts onto fabric. Clax Master G is most commonly applied in conjunction with a surfactant booster. These products combined with bleach offer a powerful system, which may be used for cleaning fabric from hotels, hospitals and other healthcare establishments. Clax Master G enhances the wash performance on heavily soiled goods by increasing the pH of the wash solution. Always apply in combination with a surfactant based system.

Benefits

- Improves soil removal; especially food (protein) and fat stains on e.g. table and kitchen linen
- Prevents greying of linen; stabilisation of soil particles in the wash liquor
- Improves wash performance by affecting soil-fibre interaction (swelling)

Use instructions

Dosing level is dependent on water hardness, nature and level of soil and type of fabric.

Dosage recommendation in ml/kg dry goods

- low soil level: 8 - 12
- medium soil level: 15 - 20
- high soil level: 25 - 40

**This dosage is according to optimal conditions, recommendations may vary, please consult with your Diversey representative for directions.*

Master G
